4. Evaluation of Student Learning
5. University, Program, and Course Policies
6. Addendum and Other Course Details

COURSE INFORMATION

Course Number (Prefix Code): CHEM216L

Course Name: General Chemistry II Lab

Course Description: This is the second half of the two-block sequence of the CHEM211/CHEM216 lab courses designed to support theoretical principles presented in lecture through practical laboratory exercises. This course introduces the scientific method, experimental design, chemical instrumentation, data collection and analysis, and the preparation of lab reports. Students will perform laboratory exercises exploring the following topics: titration, chemical equilibrium, acid-base, kinetics concepts.

Course Delivery Model(s): Online, Online-Interactive

Time Requirement:

Lecture Hours per term:	0
Laboratory Hours per term:	30
Total Hours per term:	30
Course Duration (weeks):	5
Credits:	1

Credit Hour Verification:

This list represents the average amount of time a student is expected to spend to successfully complete this course. *Total hrs/wk 9*

	Activity Type	Live Interactive Hrs/wk	On-Ground Hrs/wk
Synchronous Course Time	Lecture	3	3
Academic Engagement	Participation/Participation	0	0.5
	Discussion Boards	0.5	0
	Supplemental Videos	1.5	1.5
	Homework (Pre, post-labs and Reports)	1.5	1.5

	Exams (outside of class)	0.5	0.5
Preparation and Study	Study (assessment prep)	2	2
Total	Total per week	9 hours	9 hours
	Total per block	45 hours	45 hours

LEARNING OUTCOMES, OBJECTIVES, & ALIGNMENT

Student/Course Learning Outcomes

In successfully completing this course, you will be able to:

SLO/CLO
1. Demonstrate proficiency in assembling basic laboratory glassware.
2. Perform fundamental laboratory techniques.
3. Record experimental observations and interpret results.

TEXTBOOKS & MATERIALS

Required Textbook(s):

Lab: SCU General Chemistry Laboratory Manual (available on Canvas).

Required Material(s):

Lab Notebook: Students will be required to keep a laboratory notebook, and the instructor will grade notebook entries. The notebook allows students to accurately record experiment procedures and data, so students should write it so that someone else could repeat the experiments and get the same results. Among other things, this includes recording all spectroscopic and analytical data obtained from the experimental procedure. Further information about the lab notebook will be provided in class.

Working computer with a strong internet connection, camera, and a microphone.

Scientific calculator: *Graphing or text-memory calculators are not allowed for use during quizzes or exams in the lab. If you bring one you will have to take your quiz without a calculator. You are encouraged to obtain a scientific calculator with exponents and logarithms immediately, rather than the day before a quiz or an exam. It is important to be comfortable with the calculator that you are using, rather than to be struggling to locate the keys for certain mathematical operations. For example, a TI-30X IIS is acceptable.*

Provided Materials: Flame resistant Lab Coat/Apron, Nitrile gloves, Safety Goggles. Only approved safety goggles must be worn. Approved safety goggles will be provided by the lab instructor during the first lab session. Goggles are required during all lab sessions. No goggles, no experiment.

Required Attire: Attire for lab: Close-toed shoes, professional attire and lab coats are mandatory during all lab hours. No shorts, heels, or flip-flops will be allowed in the laboratory; hair longer than shoulder-length must be pulled back and held with a clip or hair tie. Gloves, goggles and additional safety equipment will be required per experiment.

Technology Requirements:

Learning Management System: is Canvas. If you are not familiar with using Canvas, please visit the manuals and learning guides available in the Canvas Student Guide. It is important that you are comfortable and competent in using this; all course material and communication will be done via Canvas.

Navigating Canvas – the Canvas site has a large set of [Canvas tutorials and videos for students](#) [Browser and Computer Requirements for Canvas](#)

Examination System: Proctorio. We will be using the Proctorio Online Exam Proctoring Service in this course. Proctorio is a software extension in Chrome that uses your computer's screen, web cam, and microphone to create a remote proctored environment, and enables students to take exams via Canvas from any remote location. *Students must have a strong and stable internet connection for Proctorio to work well.* During exams, students, the computer, the BuffOne Card, and the surrounding environment may be recorded.

For information about Proctorio's privacy policies, please visit OIT's Proctorio Privacy page. In addition to the instructor(s) and Teaching Assistants(s) of this course, Proctorio administrators are the only ones who will have access to the recordings. The Chrome browser extension must be installed before students can take any exam, and it can be removed once an exam is complete.

There will be an initial practice exam for students to become familiar with using Proctorio, which allows students to identify any potential issues prior to using this examination system.

Suggestions for completing online coursework: Save work often; this includes backing it up on multiple devices or cloud applications. When submitting final papers on the Canvas learning management system (LMS), ensure that all files have been uploaded properly. Also make sure to keep a hard copy of all papers/projects in case of an unforeseen technological failure or outage.

EVALUATION OF STUDENT LEARNING

Grading scale:

Letter grade ("D" allowable): Undergraduate and Certificate Programs, Accelerated Sciences Courses

A = 90% - 100%

B = 80% - 89.99%

C = 70% - 79.99%

D = 60% - 69.99%

F = 0.0% - 59.99%

Assessments:

Assessment Name	# of assignments	Weight	SLO Linkage
Lab Quizzes	2	40%	1-3
Lab Notebooks	7	10%	1-3
Pre-Labs	7	15%	1-3
Post-Labs	7	25%	1-3
Participation (discussions, worksheets, etc.)	8	10%	1-3

Course Topics:

Module	Title	Topic	Assessment Activity	SLO Linkage
1	Liquids	Preparation of Solutions	Pre-lab, post-lab, notebook entry, worksheet and participation.	1-3
2	Kinetics and Equilibrium	Chemical kinetics Iodine clock Le Chatelier's Principle	Pre-lab, post-lab, notebook entry and participation.	1-3
3	Aqueous Equilibria And Acid and Base	Hydrolysis, Weak acids and Buffers Standardization of NaOH and Titration of Sulfuric Acid	Pre-lab, post-lab, notebook entry and participation.	1-3
4	Equilibrium	Weak Acid K_{sp}	Pre-lab, post-lab, notebook entry and participation.	1-3
5	Electrochemistry	Electrochemistry and Redox Reactions	Pre-lab, post-lab, notebook entry and worksheet and participation.	1-3

UNIVERSITY POLICIES

All university policies apply to this course and all others. For full policy information please consult the SCU Catalog. Additionally, program policies apply to students in each program as described in the Catalog and in SCU Health Handbook for clinical courses.

Drop Date: It is your responsibility to understand when you need to consider unenrolling from a course. Refer to the [SCU Academic Calendar](#) for dates and deadlines for registration. Refer to SCU Academic Policies for [information about the drop period](#).

Incomplete Policy: Under emergency/special circumstances, students may petition for an incomplete grade. See the [SCU Catalog for Policies about Incomplete Grades](#)

Academic Integrity: As a student at this university you are expected to maintain high degrees of professionalism, commitment to active learning, and integrity in and out of the classroom. See the [SCU Academic Integrity Code](#).

Accessibility Services and Accommodations: The Office of Student Services provides support to students with disabilities requiring accommodations in concert with the lead faculty for this course. All students are encouraged to request accommodations as far in advance of when the accommodation will be required as possible to allow the University to process the request and provide approved accommodations. To begin the process please request a consultation with the designated Accessibility Services Officer as soon as possible. Once the Office of Student Services approves the request, the letter of accommodation will be provided to the student and lead faculty member via email. The student should be certain to follow-up with the lead faculty member to plan for the specific accommodation needs for the course. Program requirements cannot be modified to accommodate a disability. Please see the catalog for details regarding [Accessibility Services and Accommodations](#).

Learning Resource Center: Students can use the library's resources which provide students with an excellent collection of books, journals, electronic databases, and websites as well as consult with the librarian to help with the course.

Online Etiquette: In general, behavior in an online classroom should emulate the professional behavior expected in an on-ground classroom with a few additional requirements:

- Avoid using text slang and abbreviations such as "u" (instead of "you"), "TLDR" (Too Long, Didn't Read) or "TBH" (To Be Honest) - not everyone knows what they are. Do not use ALL CAPS for entire sentences or posts - this is seen as yelling at someone.
- Any form of personal attack or inappropriate response with other students or faculty is unacceptable. We will remove any discussion posts showing this and warn the author.
- If you disagree with someone's comments, do so respectfully and collegially, and provide legitimate examples to support your side. Try to find something to complement in the other's comments.
- Before you press the submit button, review your comments, making sure nothing is coming across as defensive, too "know-it-all" or critical, or academically inappropriate. It is easy for someone to misinterpret your meaning when they cannot see your expression or hear the tone of your voice.
- Avoid short, generic replies such as "I agree!", "I like it!" or "Funny!" – explain why you agree, add another point in support of the idea, or raise a question.

Attendance: [SCU policy](#) defines attendance for all courses and specifies online courses as active, weekly participation in the course as described in the syllabus. Examples of activities could include, but are not limited to:

- Participating in weekly online discussions
- Submitting or completing assignments
- Commenting on other student contributions
- Actively logged on and participating in class at least three times per week

See the Academic Policies page in the SCU Catalog for more details on Attendance Policy.

Program Specific Policies

[to be completed by SCU]

Course Specific Policies

Participation: Students are expected to actively participate in the course by completing assignments and activities in the course. To maintain "active participation," you have to complete at least 60% of the

assigned work, including quizzes, activities, and discussion posts, on time, contribute fully to the general activities of the course, and access the course at a level that allows you to succeed in the course.

Late Assignments and Exams: Your instructor will post assignments by 12:01 a.m. Pacific Time at the start of each week. You are expected to have all your submissions for the week completed by the due dates and times listed. The instructor reserves the right to make changes to the schedule if necessary.

Late work is not accepted. The online learning environment is an INTERACTIVE environment - your classmates depend on you to submit on time so that they can produce on-time responses to your work.

Commitment to Honesty and Respect: In this class, we seek to create a classroom community in which the rights, dignity, and worth of every individual are respected. This includes use of respectful language, paying full attention to the words and works of our peers, exploring our own biases, and giving and receiving feedback as we work and learn together. Please speak up if I or any member of the community behaves in a way that undermines the security and effectiveness of our time together.

Recommendations for Success:

- Learning chemistry requires a significant time commitment. This commitment not only involves attending lectures, but actively studying both before and after each lecture.
- Successful students don't wait until exam time to begin studying. Instead, every hour spent in class requires two to three hours of effort outside of class to succeed in this course. For example, if you've just been assigned reading on the "stoichiometry;" don't let a day go by without learning how to balance reactions and convert among different quantities. All of chemistry necessitates an understanding of stoichiometry and this will be part of most lectures, quizzes and exams. Procrastination doesn't simply mean that you won't understand stoichiometry—you'll also face difficulty understanding all of the following material.
- Read before and read after each class. Skim the chapter before it is covered in class to become comfortable with some of the terms associated with each topic. Then, review the material after class to enhance your understanding of what was covered.
- Participate during class: Take notes during class and review them afterwards. Don't skip classes, arrive late, or leave early. Ask questions for clarification when you don't understand the material.
- Stay on top of the homework assignments: Work on them soon after lecture to increase the depth of your understanding of specific structures. This will help you learn the material more efficiently and effectively.
- Do not wait till the last minute to start working on an assignment. You will get more out of it if you take the time to really learn the facts and review the material without being rushed.
- Form and join a study group. Seek out those students who strive to excel in the course. This makes studying more fun and helps you learn the material better. If you can explain what you learned to another student, then you know the material. Exchanging knowledge reinforces each and everyone.
- Stay focused by finding an environment where you can study with few distractions.

Specifically for synchronous courses:

- Ask questions for clarification when not understanding the material being covered.
- *Do not skip class, arrive late, or leave early.* Given the accelerated nature of our courses, every minute of class missed can have a real impact on student success in a course.
- Work on assigned problems as close to the time as when the topic is covered in class to increase understanding of specific concepts.
- Find a group of students to study with. This makes studying more fun and helps learning of the material by teaching to and learning from peers. Explaining these concepts to other students aids in mastery of what is covered.

Teaching Methods & Instruction

Evaluation of Experimental Techniques: Students will be assessed on their overall performance and regards for the rules of the laboratory and safety procedures.

Attendance and Participation: Because experiments are the main point of this class, attendance and participation are mandatory and will be incentivized through grades. For each lab period students will receive points for participation grade. Showing up prepared and on time is one part of this grade, the other is doing the lab work. Students should check with the lab instructor before leaving the laboratory after completing each experiment. *Students are expected to attend all scheduled lab meetings.*

Lab Notebook: Students will be required to keep a laboratory notebook, and the instructor will grade notebook entries. The notebook allows students to accurately record experiment procedures and data, so it should be written so that someone else could repeat the experiments and obtain the same results. This includes recording all spectroscopic and analytical data obtained from the experimental procedure. Further information about the lab notebook will be provided in class.

Pre-Labs: Pre-labs contain content questions that are intended to help students prepare for lab procedures. Pre-labs can be found in the lab manual and must be completed before each lab class.

Post-Labs: Post-labs, or lab reports will consist of the report sheet(s), answers to post-lab questions and sometimes Excel plots of data analysis when appropriate. While the lab activity may be group-based, lab reports must be completed individually (lab reports are not group assignments).

Laboratory Quizzes: Quizzes will be given the week after experiments are conducted and their modality will be indicated by the instructor. These quizzes will be closely based on the pre-labs and lab reports.
